

Newsletter 12 HPV Vaccination Programs in Schools

15 February 2013

HPV vaccination programs are running in schools in the coming weeks so I would like to provide you with some information that is not provided in the government pamphlets. Please also note that Australia is one of the first countries to offer this vaccine universally to all boys as a prevention for anal and penile cancers and the research associating this vaccine with preventing these cancers, and with cervical cancer, has been sponsored by the manufacturers of the vaccine; Merck pharmaceutical company.

Parents should be aware of the ingredients of the HPV vaccine Gardasil®:

- sodium borate (borax)
- 225 ug amorphous aluminium hydroxyphosphate sulphate
- polysorbate 80
- L-histidine hydrochloride
- 4 recombinant VLP's: HPV types – 16, 18, 11 and 6.
- amino Acids, carbohydrates, mineral salts, vitamins

Sodium borate and polysorbate 80 are known to cause infertility in laboratory rats.

To date this vaccine has not been demonstrated to prevent any cervical cancer and this fact is presented in a recent Letter to the Editor of the Infectious Agents and Cancer Journal here <http://www.infectagentscancer.com/content/pdf/1750-9378-8-6.pdf>

I have also condensed this information into a fact sheet on my website for easier reading

There have been many adverse events and deaths associated with this vaccine and they are documented on the website Safe, Affordable, Necessary and Effective Vaccines (SANE Vax) www.sanevax.org

There are other posts about the use of HPV vaccines as a prevention for cervical cancer on the *immunisation-update* page of my website. Here are some links:

<http://www.vaccinationdecisions.net/immunisation-updates/flashing-anti-cervical-cancer-underwear-advertisement>

<http://www.vaccinationdecisions.net/immunisation-updates/hpv-vaccine-not-in-the-public%E2%80%99s-best-interests>

<http://www.vaccinationdecisions.net/immunisation-updates/to-the-australian-therapeutic-goods-administration-tga->

Please take the time to inform yourselves about this HPV vaccine because no vaccine is without side-effects and governments have a monitoring system that is not capable of making causal relationships between adverse events and the vaccine. This is because they use a 'passive' system not an 'active' monitoring system which relies entirely on voluntary reporting of reactions usually within days of the vaccine. Many of the chemicals in the vaccine are known to cause delayed reactions including autoimmune diseases and other neurological disorders.

Please take the time to inform yourselves about this vaccine before you allow your child to receive it.

Judy Wilyman MSc (Population Health)

PhD Candidate
