

**Newsletter 50 Vaccines, Autism, the CDC and Conflicts of Interest  
17<sup>th</sup> April 2014**

Please take the time to read the following link which reveals the concerns of Congressman Bill Posey about the science that has not been done to disprove a causal link between vaccines and autism. It is a fact that governments have not funded scientists to compare the health of vaccinated children with unvaccinated children to ensure that the combined schedule of vaccines (that now recommends 11 vaccines before a baby is one year old) is safe.

If you are vaccinating your child without knowing what ingredients you are injecting into the tissues or your developing infant then it is time to ensure that you are aware of your parental duty to find out. In the interests of your child's health please ask your doctor what ingredients - antibiotics, preservatives, additives and adjuvants - are in the vaccines that governments are recommending for your child.

Please also take the time to read this link which describes the conflicts of interest which dominate US and Australian government vaccine advisory boards
